Construction of buildings

Sustainable constructions and Green buildings

Waste

Offer

Water treatment

Water preparation processes comprise a wide range of technologies and physical-chemical methods. Methods must be selected with a view to the purpose of the use of the prepared water - the preparation of potable water requires a different approach from, e.g., the preparation of cooling water, feed water for boilers, or process water.

Cooperation Offered

1. Sales / Distribution

Cooperation Requested

1. Outsourcing co-operation
2. Sales / Distribution

Offer

Wastewater treatment plants

Small-scale wastewater treatment unit for households are intended for mechanical-biological treatment of municipal wastewater. The biological treatment unit can replace a septic tank or cesspool and therefore it is used for treatment of soil water from family houses, lodging-houses or cottages. AS-VARIOcomp K household treatment unit is the most suitable unit for family houses, because quick return on the amount invested and low operating costs are their major advantages.

Cooperation Offered

1. License agreement

Cooperation Requested

Offer

Rainwater management

Rainwater may sometimes bring an opportunity, at other times a problem. In our offer, you will find solution for both cases. Plastic tanks are used for rainwater storage and its subsequent use (non-drinking water); drainage systems provide for removal of rainwater from hard surfaces (e.g. car park drainage) or they support rainwater quick soaking.
